Stages of Building Planning

1. Site Analysis and Selection: Evaluating land topography, soil conditions, climate, and surrounding environment to identify suitable locations. 2. Conceptual Design: Developing initial sketches and layout options that meet client requirements and site constraints. 3. Design Development: Refining the conceptual plans into detailed layouts, including floor plans, elevations, and sections. 4. Structural Planning: Selecting appropriate materials and structural systems to support the building's loads. 5. Services Planning: Designing electrical, plumbing, HVAC, fire safety, and other utility systems. 6. Compliance and Approval: Ensuring the design meets all legal requirements and obtaining necessary permits.

Building Drawing in Civil Engineering

Building drawing, often referred to as construction drawing or blueprint, is the visual representation of the building plan. It serves as the primary communication tool among architects, engineers, contractors, and construction workers. Properly prepared drawings provide comprehensive details

needed to construct the building accurately and efficiently.

Types of Building Drawings
