Key Concepts in Solving 13 2 Application Problems

To effectively solve these problems, you need to master several foundational accounting concepts and steps:

1. Understanding the Problem

Carefully read the problem statement. Identify what is being asked—the specific account adjustments, calculations, or financial statement preparations needed. Note all given information and data points.

2. Recognizing the Relevant Accounting Principles

Determine which accounting concepts apply—e.g., matching principle, accrual accounting, depreciation methods. Decide which financial statements or accounts need adjustments.

3. Organizing Data Systematically

Create tables or lists to organize figures. Highlight opening balances, transactions, and closing balances.

4. Applying Appropriate Formulas and Methods

Use formulas for depreciation, amortization, net income calculations, etc. Follow standard procedures for adjusting entries and reconciliations.

5. Double-Check Calculations

Verify math accuracy. Ensure that your adjustments balance and reconcile.

Step-by-Step Approach to Solving 13 2 Application Problems

Below is a structured methodology to approach these problems efficiently:

Step 1: Read and Understand the Problem

Identify what is given and what is required. Clarify the timeframe (monthly, quarterly, yearly).

Step 2: Gather Necessary Financial Data

Collect income statement figures, balance sheet data, cash flow info, and other relevant details. List all figures systematically.

Step 3: Identify Required Accounts and Adjustments

Determine if adjusting journal entries are necessary. Recognize accrued expenses, prepaid items, depreciation, or amortizations.

Step 4: Prepare T-Accounts or Adjustment Schedules

Use T-accounts to visualize adjustments. Track increases and decreases in each relevant account.

Practical Example: Solving a 13 2 Application Problem

Let's illustrate a typical problem and walk through the solution steps:

Problem Statement:

A company's trial balance shows the following figures: Cash: \$10,000 Accounts Receivable: \$15,000 Supplies Expense: \$1,200 Prepaid Insurance: \$2,400 Equipment: \$50,000 Accounts Payable: \$8,000 Notes Payable: \$20,000 Owner's Equity: \$42,400 During the period, the following additional information is available: Supplies on hand at month-end are \$300. The prepaid insurance expires at \$200 per month. The estimated useful life of equipment is 5 years, with no salvage value, using straight-line depreciation. □□□ Prepare adjusting entries, updated financial statements, and determine net income.

Solution Steps:

Step 1: Identify adjustments needed Supplies used: \$1,200 initial supplies, ending supplies \$300 → Supplies expense \$900 Insurance expired: \$200 Equipment depreciation: $\$50,000 / (5 \times 12) \text{ months} = \833.33 per month Step 2: Prepare adjusting journal entries Supplies Expense: Debit \$900; Credit Supplies Inventory (or Supplies) \$900 Insurance Expense: Debit \$200; Credit Prepaid

Insurance \$200 Depreciation Expense: Debit \$833.33; Credit Accumulated Depreciation \$833.33 Step 3: Update account balances Supplies: $\$1,200 - \$900 = \$300$ (on hand) Prepaid Insurance: $\$2,400 - \$200 = \$2,200$ Equipment: remains \$50,000 Accumulated Depreciation: \$833.33 Step 4: Calculate net income Revenue: Assume total revenue is the total sales (not provided here) Expenses: Supplies Expense \$900 + Insurance Expense \$200 + Depreciation Expense \$833.33 Calculate total expenses and subtract from total revenues to obtain Net Income. Step 5: Prepare the financial statements Use adjusted account balances to draft an income statement and balance sheet.

Tips for Mastering 13 2 Application Problems

Practice regularly with varied problem types. Develop a checklist to ensure all adjustments are considered. Use visual aids like T-accounts and schedules. Cross-verify your calculations. Understand the underlying principles rather than just memorizing formulas.
