Notable Prehistoric Mammal Species

National Geographic Readers highlight a variety of remarkable prehistoric mammals, each illustrating different evolutionary paths.

Woolly Mammoth (Mammuthus primigenius)

- Adapted to cold environments with thick fur and fat deposits. - Roamed across Europe, North America, and Siberia. - Became extinct around 4,000 years ago, likely due to climate change and human hunting.

Saber-Tooth Cats (Smilodon)

- Known for their elongated, saber-like canine teeth. - Lived during the Pleistocene epoch. - Top predators of their time, hunting large herbivores.

Giant Ground Sloths (Megatherium)

- Massive herbivores that reached up to 20 feet in length. - Roamed South America during the Pleistocene. - Known for their slow movements and impressive size.

Dimetrodon (sometimes mistaken as a mammal)

- Though not a mammal, it’s often discussed in prehistoric contexts. - A synapsid, considered a precursor to mammals. - Lived during the Permian period, over 270 million years ago.
