Sample Questions and Analysis

Sample Question 1: Describe the process of DNA replication in eukaryotic cells, including the roles of key enzymes. Model Answer: DNA replication in eukaryotic cells begins at multiple origins of replication. The process involves several key enzymes: - Helicase: Unwinds the DNA double helix at the replication fork, separating the two strands. - Single-strand binding proteins: Stabilize the unwound DNA strands, preventing re-annealing. - DNA polymerase: Synthesizes the new complementary strand in a 5’ to 3’ direction by adding nucleotides to the template strand. - Primase: Synthesizes RNA primers to initiate DNA synthesis. - Leading strand synthesis: Continuous, following the replication fork. - Lagging strand synthesis: Discontinuous, forming Okazaki fragments that are later joined by DNA ligase. - DNA ligase: Seals nicks between Okazaki fragments to produce a continuous DNA strand. - The process is semi-conservative, resulting in two identical DNA molecules. Analysis: This question assesses understanding of the replication process, enzyme functions, and the semi-conservative nature of DNA duplication. Sample Question 2: A pedigree shows a trait

inherited in a pattern consistent with X-linked recessive inheritance. Explain the evidence supporting this conclusion. Model Answer: In an X-linked recessive inheritance pattern: - Males are more frequently affected because they have only one X chromosome; a single recessive allele results in the trait. - Females are carriers if heterozygous, often unaffected. - The trait skips generations, appearing primarily in males. - Carrier females can pass the allele to their sons. - Unaffected males do not pass the trait to their sons but can pass the allele to daughters, who become carriers. Evidence from the pedigree includes affected males with unaffected mothers and no affected fathers transmitting the trait to sons, consistent with X-linked recessive inheritance. Analysis: This question evaluates understanding of inheritance patterns and the interpretation of pedigree data.
