1. Nervous System

The nervous system is responsible for rapid communication and coordination within the body. It controls voluntary movements, reflexes, and internal organ functions.

1. **Central Nervous System (CNS):** Comprising the brain and spinal cord, the CNS processes information received from sensory organs and initiates responses.
2. **Peripheral Nervous System (PNS):** Consists of nerves that extend to limbs and organs, transmitting sensory information to the CNS and carrying out motor commands.
3. **Autonomic Nervous System:** Regulates involuntary functions such as heart rate, digestion, and respiratory rate, divided into sympathetic and parasympathetic divisions.

Fox emphasizes the importance of neural reflexes and neurochemical signaling in maintaining homeostasis within this system.

2. Cardiovascular System

The cardiovascular system ensures the distribution of oxygen, nutrients, and hormones while removing waste products. It comprises the heart, blood vessels, and blood.

1. **Heart:** Acts as a pump, maintaining blood flow through rhythmic contractions.
2. **Blood Vessels:** Arteries, veins, and capillaries facilitate blood transport and exchange of gases and nutrients.
3. **Blood:** Transports oxygen, nutrients, hormones, and immune cells, and maintains pH and temperature balance.

Fox highlights processes such as cardiac cycle regulation, blood pressure control, and vascular resistance as vital components of cardiovascular physiology.

This system provides support, enables movement, and protects vital organs.

1. **Bones:** Serve as structural framework and store minerals.
2. **Muscles:** Contract to produce movement and generate heat.

3. **Joints:** Allow for flexibility and mobility.

Fox discusses the physiology of muscle contraction, including the roles of actin, myosin, and calcium ions.

6. Endocrine System

The endocrine system regulates long-term processes through hormone secretion.

1. **Glands:** Pituitary, thyroid, adrenal, pancreas, and others release hormones.
2. **Hormonal Actions:** Control metabolism, growth, reproduction, and stress responses.
3. **Feedback Loops:** Maintain hormonal balance through negative and positive feedback mechanisms.
