Sample Mba Statistics Questions With Answers

Sample MBA statistics questions with answers In the realm of MBA programs, statistics is a fundamental subject that equips students with the analytical skills necessary to interpret data, make informed decisions, and support strategic planning. To excel in this discipline, students often practice with sample questions that mirror real-world scenarios and exam formats. These questions not only help in understanding core concepts but also build confidence in applying statistical methods to business problems. This article provides a comprehensive collection of sample MBA statistics questions along with detailed answers, covering topics such as descriptive statistics, probability, hypothesis testing, regression analysis, and more. Whether you are preparing for an exam or seeking to reinforce your understanding, these questions serve as valuable practice tools.

Basic Concepts in Descriptive Statistics

Question 1: Mean, Median, and Mode

Suppose the following data set represents the monthly sales (in units) for a company over 10 months: \[50, 55, 60, 60, 65, 70, 70, 70, 75, 80 \] What are the mean, median, and mode of this data set?

Answer:

- Mean: \[\text{Mean} = \frac{50 + 55 + 60 + 60 + 65 + 70 + 70 + 70 + 75 + 80}{10} = \frac{655}{10} = 65.5 \] - Median: Since there are 10 data points, the median is the average of the 5th and 6th values: \[\text{Median} = \frac{65 + 70}{2} = \frac{135}{2} = 67.5 \] - Mode: The most frequently occurring value is 70 (appears 3 times), so: \[\text{Mode} = 70 \]

Probability and Distributions

Question 2: Basic Probability

A company has 4 managers and 6 employees. If a manager and an employee are chosen at random, what is the probability that both are selected?

Answer:

Assuming the selection involves choosing one manager and one employee independently: - Total managers = 4 - Total employees = 6 - Total individuals = 10 Number of ways to select one manager = 4 Number of ways to select one employee = 6 Total possible pairs = 4 × 6 = 24 Since each pair is equally likely, the probability that a randomly selected pair consists of one manager

and one employee is: $$ P = \frac{\text{Number of favorable pairs}}{\text{Total pairs}} = 1 \quad \text{(since any pair is valid)} $$ But if the question asks: "What is the probability that both selected individuals are managers?" then: $$ P = \frac{\text{Number of ways to select 2 managers}}{\text{Number of ways to select any 2 individuals}} = \frac{\binom{4}{2}}{\binom{10}{2}} = \frac{6}{45} = \frac{2}{15} $$ Similarly, for both being employees: $$ P = \frac{\binom{6}{2}}{\binom{10}{2}} = \frac{15}{45} = \frac{1}{3} $$

Hypothesis Testing

Question 3: Testing the Mean

A sample of 30 sales representatives has an average monthly sales of 200 units with a standard deviation of 20 units. Test at the 5% significance level whether the average sales of all sales representatives is different from 195 units. Assume the population standard deviation is unknown.

Answer:

This is a two-tailed t-test for the population mean. Step 1: State hypotheses - Null hypothesis H_0: $\mu = 195$ - Alternative hypothesis H_1: $\mu \neq 195$ Step 2: Calculate the test statistic $$ t = \frac{\bar{x} - \mu_0}{s / \sqrt{n}} = \frac{200 - 195}{20 / \sqrt{30}} = \frac{5}{20 / 5.477} \approx \frac{5}{3.651} \approx 1.368 $$ Step 3: Determine degrees of freedom $$ df = n - 1 = 29 $$ Step 4: Find the critical t-value At $\alpha=0.05$, two-tailed test, for $df=29$: $$ t_{critical} \approx \pm 2.045 $$ Step 5: Make a decision Since $|t| = 1.368 < 2.045$, we fail to reject the null hypothesis. Conclusion: There is no sufficient evidence at the 5% significance level to conclude that the average sales differ from 195 units.

Regression Analysis

Question 4: Simple Linear Regression

A company wants to predict sales based on advertising expenditure. The following data points are collected: | Advertising (X) in $100s | Sales (Y) in units | ||| | 1 | 20 | | 2 | 24 | | 3 | 30 | | 4 | 36 | | 5 | 40 | Calculate the regression equation $Y = a + bX$.

Answer:

Step 1: Calculate means $$ \bar{X} = \frac{1 + 2 + 3 + 4 + 5}{5} = 3 \\ \bar{Y} = \frac{20 + 24 + 30 + 36 + 40}{5} = 30 $$ Step 2: Calculate b (slope) $$ b = \frac{\sum (X_i - \bar{X})(Y_i - \bar{Y})}{\sum (X_i - \bar{X})^2} $$ Calculate numerator: $$ \sum (X_i - \bar{X})(Y_i - \bar{Y}) = (1-3)(20-30) + (2-3)(24-30) + (3-3)(30-30) + (4-3)(36-30) + (5-3)(40-30) \\ = (-2)(-10) + (-1)(-6) + 0 + (1)(6) + (2)(10) = 20 + 6 + 0 + 6 + 20 = 52 $$ Calculate denominator: $$ \sum (X_i - \bar{X})^2 = (-2)^2 + (-1)^2 + 0^2 + 1^2 + 2^2 = 4 + 1 + 0 + 1 + 4 = 10 $$ Thus, $$ b = \frac{52}{10} = 5.2 $$ Step 3: Calculate intercept a $$ a = \bar{Y} - b \bar{X} = 30 - 5.2 \times 3 = 30 - 15.6 =

14.4 \] Regression Equation: \[Y = 14.4 + 5.2X \]

Probability Distributions and Business Applications

Question 5: Normal Distribution

The daily demand for a product follows a normal distribution with a mean of 500 units and a standard deviation of 50 units. What is the probability that on a randomly selected day, the demand exceeds 550 units?

Answer:

Step 1: Find the z-score \[z = \frac{X - \mu}{\sigma} = \frac{550 - 500}{50} = 1 \] Step 2: Find the probability Using standard normal distribution tables or a calculator: \[P(Z > 1) = 1 - P(Z \leq 1) \approx 1 - 0.8413 = 0.1587 \] Therefore, there is approximately a 15.87% chance that demand exceeds 550 units on a given day.

Advanced Topics: ANOVA and Chi-Square Tests

Question 6: One-Way ANOVA

Three different marketing strategies were tested across 5 regions each, with the following sales increases (in units): | Strategy A | Strategy B | Strategy C | |||| | 20 | 25 | 30 | | 22 | 27 | 29 | | 19 | 26 | 31 | | 21 | 24 |

Sample Questions and Detailed Solutions

1. Descriptive Statistics and Data Interpretation

Question: A company records the quarterly sales figures (in thousands of dollars) for the past year as follows: 120, 135, 150, 145, 160, 155, 140, 130, 125, 165, 170, 155. Calculate the mean, median, and standard deviation of these sales figures. Answer: Step 1: Organize data in ascending order: 125, 130, 135, 140, 145, 150, 155, 155, 160, 165, 170 Note: There are 12 data points. Step 2: Calculate the Mean: Sum of all values = 125 + 130 + 135 + 140 + 145 + 150 + 155 + 155 + 160 + 165 + 170 = 1730 Mean = Total Sum / Number of observations = 1730 / 12 ≈ 144.17 Step 3: Calculate the Median: Since there are 12 observations (even), median is average of the 6th and 7th values. 6th value = 150, 7th value = 155 Median = (150 + 155) / 2 = 152.5 Step 4: Calculate the Standard Deviation: Variance (s^2) is calculated as: $s^2 = \Sigma(xi - mean)^2 / (n - 1)$ Calculations: - $(125 - 144.17)^2 \approx 364.36$ - $(130 - 144.17)^2 \approx 201.19$ - $(135 - 144.17)^2 \approx 84.07$ - $(140 - 144.17)^2 \approx 17.39$ - $(145 - 144.17)^2 \approx 0.69$ - $(150 - 144.17)^2 \approx 33.94$ - $(155 - 144.17)^2 \approx 117.0$ - $(155 - 144.17)^2 \approx 117.0$ - $(160 - 144.17)^2 \approx 249.39$ - $(165 - 144.17)^2 \approx 437.68$ - $(170 - 144.17)^2 \approx 660.10$ Sum of squared deviations ≈ 364.36 + 201.19 + 84.07 + 17.39 + 0.69 + 33.94 + 117.00 + 117.00 + 249.39 + 437.68 + 660.10 ≈ 2282.41 Variance = 2282.41 / (12 - 1) = 2282.41 / 11 ≈ 207.49 Standard deviation = $\sqrt{207.49} \approx 14.41$ Summary: - Mean ≈ 144.17 - Median = 152.5 - Standard deviation ≈ 14.41

2. Probability Distribution and Calculations

Question: A marketing survey indicates that 30% of consumers prefer product A over product B. If a random sample of 10 consumers is surveyed, what is the probability that exactly 4 consumers prefer product A? Assume independence. Answer: This is a binomial probability problem where: - n = 10 - p = 0.30 - k = 4 The binomial probability formula: P(X = k) = C(n, k) p^k (1 - p)^(n - k) Calculate: C(10, 4) = 210 P = 210 (0.30)^4 (0.70)^6 Compute each term: - (0.30)^4 = 0.0081 - (0.70)^6 ≈ 0.117649 Now: P = 210 0.0081 0.117649 ≈ 210 0.000954 ≈ 0.200 Therefore, the probability that exactly 4 consumers prefer product A is approximately 20%.

3. Hypothesis Testing

Question: A manufacturing process produces widgets with a mean weight of 50 grams. A quality inspector believes the process has changed, and the mean weight is now different. A sample of 36

widgets yields a sample mean of 48.5 grams with a standard deviation of 4 grams. Test at a 5% significance level whether the process has changed. Answer: Step 1: State hypotheses: - Null hypothesis (H_0): $\mu = 50$ grams - Alternative hypothesis (H_1): $\mu \neq 50$ grams Step 2: Identify test statistic: Since the sample size is large (n=36), we can use a Z-test: $Z = (\bar{x} - \mu_0) / (s / \sqrt{n})$ Where: $\bar{x} = 48.5$ $\mu_0 = 50$ $s = 4$ $n = 36$ Calculate standard error: $SE = 4 / \sqrt{36} = 4 / 6 \approx 0.6667$ Calculate Z: $Z = (48.5 - 50) / 0.6667 \approx (-1.5) / 0.6667 \approx -2.25$ Step 3: Critical value: At $\alpha = 0.05$ for a two-tailed test, critical Z-values are ± 1.96. Step 4: Decision: Since $-2.25 < -1.96$, we reject H_0. Conclusion: There is sufficient evidence at the 5% significance level to conclude that the process mean weight has changed from 50 grams.

4. Regression Analysis and Correlation

Question: A researcher collects data on advertising expenditure (in $000s) and sales (in $000s) for 6 months: | Month | Advertising ($000s) | Sales ($000s) | |||| | 1 | 2 | 20 | | 2 | 3 | 25 | | 3 | 4 | 30 | | 4 | 5 | 35 | | 5 | 6 | 40 | | 6 | 7 | 45 | Determine the correlation coefficient and interpret the strength of the relationship. Answer: Step 1: Calculations of means: - Mean of advertising: (2 + 3 + 4 + 5 + 6 + 7) / 6 = 27 / 6 = 4.5 - Mean of sales: (20 + 25 + 30 + 35 + 40 + 45) / 6 = 195 / 6 ≈ 32.5 Step 2: Calculate numerator for correlation coefficient: $\Sigma[(Xi - \grave{X})(Yi - \bar{Y})]$: | Month | Xi | Yi | Xi - $\grave{X}$ | Yi - $\bar{Y}$ | Product | ||||||| | 1 | 2 | 20 | -2.5 | -12.5 | 31.25 | | 2 | 3 | 25 | -1.5 | -7.5 | 11.25 | | 3 | 4 | 30 | -0.5 | -2.5 | 1.25 | | 4 |

Subfolders can be used to separate drafts, final versions, and archived files. This approach helps prevent accidental use of outdated documents and supports better version control over time.

Naming conventions for PDF files

Clear and consistent naming conventions are essential for managing large collections. Descriptive filenames that include relevant keywords, dates, or version numbers improve both human readability and searchability. When naming Sample Mba Statistics Questions With Answers, avoid vague labels and unnecessary abbreviations that may cause confusion later.

Using standardized naming patterns across the entire library ensures uniformity. This practice is especially useful when multiple users contribute to the same digital library.

Using metadata to enhance organization
Metadata adds an extra layer of organization beyond folder structures and filenames. PDF metadata such as title, author, subject, and keywords allow documents to be sorted and filtered efficiently. Properly filled metadata helps users locate Sample Mba Statistics Questions With Answers even when its physical location within the library is forgotten.

Metadata is particularly valuable in document management systems and advanced PDF readers that support filtering and search based on document properties.

Version control and document history
Managing multiple versions of the same document is one of the biggest challenges in digital libraries. Clear version labeling prevents confusion and ensures users access the most current edition of Sample Mba Statistics Questions With Answers. Including version numbers or revision dates in filenames helps track document evolution.

Maintaining a simple changelog provides context for updates and allows users to understand what has changed between versions. This is especially important in professional and collaborative environments.

Tagging and categorization strategies
Tags provide flexible organization beyond fixed folder structures. Applying descriptive tags allows PDFs to belong to multiple categories without duplication. For example, Sample Mba Statistics Questions With Answers can be tagged by topic, audience, or usage type, making it easier to retrieve in different contexts.

Tagging systems work best when controlled and consistent. Establishing guidelines for tag usage prevents fragmentation and maintains clarity within the library.

Search and retrieval optimization
Efficient search functionality is critical for large PDF collections. Ensuring that PDFs contain selectable text and are properly indexed improves search accuracy. When Sample Mba Statistics Questions With Answers is text-based and well-structured, keyword searches become significantly faster and more reliable.

Using OCR for scanned documents converts images into searchable text, improving both usability and accessibility across the library.

Managing storage and performance
Large PDF libraries can consume significant storage space. Regular audits help identify duplicate files, outdated documents, and unnecessary copies. Removing or archiving these files improves performance and reduces clutter, making Sample Mba Statistics Questions With Answers easier to

manage.

Compressing PDFs without sacrificing quality helps optimize storage usage. Balanced file size management ensures that documents load quickly while maintaining readability.

Cloud-based libraries and synchronization

Cloud storage solutions offer flexibility and accessibility for digital libraries. Synchronizing PDFs across devices ensures that users can access Sample Mba Statistics Questions With Answers anytime and anywhere. Cloud platforms also provide version history and backup features that add resilience to document management workflows.

When using cloud services, understanding sync settings prevents conflicts and accidental overwrites. Clear usage guidelines help maintain data integrity across multiple users and devices.

Collaboration within digital libraries

Digital libraries often serve multiple users simultaneously. Establishing clear roles and permissions helps prevent unauthorized changes. Read-only access, editing privileges, and controlled sharing ensure that Sample Mba Statistics Questions With Answers remains accurate and consistent.

Collaboration tools that support annotations and comments enhance teamwork without altering the original document. This approach preserves content integrity while allowing feedback and discussion.

Security and access control

Protecting sensitive documents is essential in digital libraries. PDFs support security features such as password protection and restricted editing. Applying appropriate access controls to Sample Mba Statistics Questions With Answers helps safeguard information while maintaining usability for authorized users.

Regularly reviewing permissions ensures that access remains aligned with current needs and responsibilities, reducing the risk of data exposure.

Backup strategies and data protection

No digital library is complete without a reliable backup strategy. Storing copies of PDFs in multiple locations protects against data loss due to hardware failure, accidental deletion, or system errors. Backups ensure that Sample Mba Statistics Questions With Answers remains available even in unexpected situations.

Automated backup solutions reduce the risk of human error and provide consistent protection over time. Periodic testing of backups ensures reliability and accessibility when needed.

Archiving outdated or inactive documents
Not all documents require frequent access. Archiving older or inactive PDFs helps keep active libraries streamlined. Archived versions of Sample Mba Statistics Questions With Answers remain available for reference without cluttering daily workflows.

Clear archive labeling prevents confusion and ensures that users understand the status and relevance of archived documents.

Accessibility in large PDF libraries
Accessibility is a critical consideration when managing digital libraries. Ensuring that PDFs are readable by assistive technologies expands usability for diverse audiences. Selectable text, logical structure, and proper tagging make Sample Mba Statistics Questions With Answers more inclusive.

Accessible documents also improve search accuracy and overall user experience for all users, not just those with accessibility needs.
